# SUCCESSFUL PREGNANCY OUTCOME IN A CHRONIC KIDNEY DISEASE PATIENT

*Saturday, 3 October 2020 15:45 (10 minutes)*

Pregnancy in patients with advanced chronic kidney disease is a challenging prospect. Even when fertilization is successful the clinical outcome of pregnancy is unfavourable with great frequency of spontaneous abortions and increased risk of perinatal mortality.

We are presenting a case 30 wks period of gestation with beta thalassemia trait with pANCA positive with chronic kidney disease patient who was on hemodialysis was referred to us from nephrology department. She turned out to be covid positive. Emergency LSCS was done in covid operation theatre and delivered a preterm alive baby who was shifted to NICU. Baby was discharged healthy from NICU after 30 days.
