## Mixed benign Brenner tumor with mucinous cystadenoma

A 70yr multiparous woman presented with abdominal distension upto size of 40 wks over period of 5 months. On examination, a huge mass was present filling all quadrants of abdomen, cystic in consistency, non tender. Cervix fused with vagina. In all fornices fullness was present. Patient underwent exploratory laparotomy with Total abdominal hysterectomy with BSO. Laparotomy did not reveal any abdominal lymphadenopathy. Cyst size was approx 28x23x20 cm and wt was 11.215 kgs, sent for histopath. Cut section shows predominantly cystic with solid area, cysts were multiloculated filled with mucinous fluid. Solid area measuring 6.5x4.5x2.5 cm, cut section was gritty with yellowish white area. Histology showed mixed benign Brenner tumor with mucinous cystadenoma right ovary. Post op period was uneventful and patient discharged from hospital on post op day 16.
