comparative study of combination of mifepristone and misoprostol regimine with misoprostol only for midtrimester abortion

Saturday, 18 September 2021 14:55 (10 minutes)

To compare the effect of oral mifepristone with misoprostol and misoprostol alone in cervical ripening and labor in mid trimester abortion.this was randomised control analysis and prospective study in dheeraj hospital in 2019 which included 160 anc cases with gestational age > 12 weeks and <20 weeks with specific indications for abortion out of which 80 were induced with vaginal misoprostol and oral mifepristone and 80 alone with vaginal misoprostol.patients with combination therapy delivered early with lesser induction-abortion time however. side effects were same as with vaginal misoprostol alone.
